

A B S T R A C T

A Plasma or serum separation membrane that enables
omitting centrifugal separation, is free from hemolysis
5 attributed to destruction of red blood cells and realizes
easy and rapid separation of plasma or serum from blood; and
a filter apparatus including the plasma or serum separation
membrane. In particular, a plasma or serum separation
membrane being a membrane for separation of plasma or serum
10 from blood and having a void ratio of 30% or below; and a
filter apparatus comprising a filter member capable of
attaining movement of plasma swifter than movement of blood
cells and a plasma or serum separation membrane connected in
series with a rear side of the filter member.
